

## **Experiment - 3**

Student Name: Archita Srivastava UID: 23BCS12459

Branch: BE-CSE Section/Group: KRG-2B

Semester: 5<sup>th</sup> Date of Performance:23/9/25

Subject Name: Project Based Learning in Java

Subject Code: 23CSH-304

**Aim:** To write a Java program to calculate the square root of a number entered by the user. Use try-catch to handle invalid inputs (like negative numbers or non-numeric values).

**Objective:** To understand how to handle invalid inputs using try-catch blocks in java.

Input Used: Java exception classes, try-catch block, Scanner class for input.

### **Procedure:**

- 1. Prompt the user to input a number.
- 2. Convert input to a number type using Scanner.
- 3. Use a try-catch block to handle NumberFormatException and check for negative values.
- 4. If number is negative, throw exception.
- 5. If number is valid, print its square root.

# Sample Input Enter

a number: -19 **Sample Output -**

Error: Cannot calculate square root of a negative number.

### Code -

```
package intro_day1; import
java.util.List; import
java.util.Scanner; import
java.util.ArrayList;

class Notvalidinput extends Exception{
public Notvalidinput(String msg) {
super(msg);
```

# DEPARTMENTOF COMPUTERSCIENCE&ENGINEERING

Discover. Learn. Empower.

```
} class practice{ public static void
main(String args[]) { Scanner sc=new
Scanner(System.in);
System.out.println("Enter num: "); int
x=sc.nextInt(); try { if(x<0) {</pre>
throw new Notvalidinput("square root not valid for negatives");
} int
low=1, high=x, ans=0;
while(low<=high) { int</pre>
mid=(low+high)/2;
if(mid*mid>x) {
high=mid-1; }
else if(mid*mid<x) {</pre>
ans=mid; low=mid+1;
}
else {
System.out.println(mid);
return;
}
System.out.println(ans);
catch(Notvalidinput e) {
System.out.println("error: "+e.getMessage());
}
}
}
```

# Output -

```
Enter num:
196
square root is:14
```

```
Enter num:
-1788
error: square root not valid for negatives
```
